2.4 交通 (Transport)	12

Task 1: 图表作文 (Academic Writing Task 1)

折线图 (Line Graph)

Task 1 line [其他 Other]

The graph below shows the consumption of three spreads (margarine, butter, and low fat and reduced spreads) from 1981 to 2007. Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

图表数据: Butter: ~140g (1981) → peak 160g (1986) → ~50g (2007). Margarine: ~90g (1981), fluctuating → ~40g (2007). Low-fat & reduced: begins 1996 at ~10g → peak >80g (~2001) → ~70g (2007). Units: grams.

参考范文 (来源: IELTS Liz —Line graph (spreads), Band 9)

The line graph illustrates the amount of three kinds of spreads (margarine, butter, and low fat and reduced spreads) which were consumed from 1981 to 2007. Units are measured in grams.

Overall, **the consumption of margarine and butter decreased over the period** given, while for low fat and reduced spreads, it rose. At the start of the period, butter was **the most popular spread**. Margarine was the most widely consumed in the middle of the period but, by the end, low fat and reduced spreads was most popular.

With regards to the amount of butter used, it began at around 140 grams and then **peaked at** 160 grams in 1986 before **falling dramatically** to about 50 grams in the last year. Likewise, approximately 90 grams of margarine was eaten in the first year, after which the figure **fluctuated slightly** and dropped to a low of 40 grams in 2007.

On the other hand, the consumption of low fats and reduced spreads only started in 1996 at about 10 grams. This figure, which **reached a high of** just over 80 grams five years later, fell slightly in the final years to approximately 70 grams in 2007.

亮点分析

This Band 9 report nails the two things examiners reward most in Task 1. First, it opens with a clear paraphrase of the rubric and then devotes a dedicated **overview** paragraph to the big-picture trends without quoting specific numbers —the single most important move for Coherence and Task Achievement.

Second, its Lexical Resource is built on a rich set of trend verbs and data phrases ("peaked at", "falling dramatically", "fluctuated slightly", "reached a high of") used accurately, so figures are reported with precision rather than a flat "went up / went down".

高分表达

- **peaked at** (达到峰值 (为……)) ——替代 reached the highest point
- **fall dramatically** (急剧下降) ——升级 decrease a lot
- **fluctuate slightly** (小幅波动) ——描述上下起伏
- **reach a high of** (达到……的高点) ——对应 drop to a low of
- **over the period given** (在所给时间段内) ——Task 1 概述常用时间状语
- **plummet to** (骤降至) ——比 fall 更强烈
- **level/tail off** (趋平/逐渐减少) ——描述末段放缓

生成范文 (目标 Band 8.5+ · 169 words)

The line graph compares how much of three spreads —margarine, butter, and low-fat and reduced spreads —was consumed, in grams, between 1981 and 2007.

Overall, **the consumption of both butter and margarine declined markedly** over the period, whereas low-fat and reduced spreads, despite a later start, **saw a steady rise**. Butter was initially the most popular, but by 2007 it had been overtaken by the low-fat alternative.

In 1981, butter stood at roughly 140 grams and **climbed to a peak of** 160 grams in 1986, before **plummeting to** around 50 grams by the end of the period. Margarine followed a broadly similar downward trajectory, beginning near 90 grams, **fluctuating slightly**, and **bottoming out at** about 40 grams in 2007.

By contrast, low-fat and reduced spreads were not introduced until 1996, when consumption stood at a mere 10 grams. The figure then **surged to a high of** just over 80 grams within five years, before **tailing off to** approximately 70 grams in the final year —making it the only spread whose consumption was higher at the end of the period than when it first appeared.

表格 (Table)

Task 1 table [城市化 Urbanisation]

The first table below shows changes in the total population of New York City from 1800 to 2000. The second and third tables show changes in the population of the five districts of the city (Manhattan, Brooklyn, Bronx, Queens, Staten Island) over the same period. Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

	New York City (all five districts)
Year	Population
1800	79,216
1900	3,437,202
2000	8,009,185

	Manhattan	
Year	Population	As percentage (%) of total population
1800	60,515	76%
1900	1,850,093	54%
2000	1,538,096	19%

	Other districts (Brooklyn, Bronx, Queens, Staten Island)	
Year	Population	As percentage (%) of total population
1800	18,701	24%
1900	1,587,109	46%
2000	6,471,089	81%

图表数据: Table 1 —NYC total: 79,216 (1800) → 3,437,202 (1900) → 8,009,185 (2000). Table 2 —Manhattan: 60,515/76% (1800) → 1,850,093/54% (1900) → 1,538,096/19% (2000). Table 3 —Other boroughs (Brooklyn, Bronx, Queens, Staten Island): 18,701/24% (1800) → 1,587,109/46% (1900) → 6,471,089/81% (2000). Key trends: massive overall growth (~100×); Manhattan's share collapsed from 76% to 19%; outer boroughs surged from 24% to 81%; Manhattan's absolute population actually fell between 1900 and 2000.

参考范文 (来源: 查看原文)

The tables show how the population was distributed across New York City's boroughs over a 200-year period, from 1800 to 2000.

Overall, the total population grew enormously, while **the main concentration of people shifted away from Manhattan to the other four boroughs.**

In 1800, the city's total population was under 80,000, and Manhattan accounted for **the vast majority** at 76%. By 1900, the total number had risen sharply to around 3.4 million, but Manhattan's share had dropped to just over half (54%). **In contrast**, the combined population of the other boroughs grew from about 18,700 to 1.59 million, increasing their overall proportion from 24% to 46%.

This trend continued throughout the 20th century. By the year 2000, the total population was over 8 million. However, only 19% lived in Manhattan, which is a significant

drop. The other boroughs were home to **the overwhelming majority** (81%), with a combined population of nearly 6.5 million, **far exceeding** Manhattan's 1.54 million.

亮点分析

The sample demonstrates Band 9 economy: it never lists all data mechanically but selects the most telling contrasts —Manhattan's proportional collapse versus the outer boroughs' rise. The overview does the critical work of naming both macro-trends (total growth + internal redistribution) without quoting any figures, reserving figures for the body paragraphs. Cohesion is managed through 'In contrast', 'This trend continued', and temporal anchoring ('By 1900', 'By the year 2000'). Lexical precision is apparent in 'the overwhelming majority', 'far exceeding', and 'shifted away from ... to'. One weakness is word repetition ('population' 6×, 'million' 5×, 'total' 4×), which a Band 8.5 response would mitigate through synonyms ('headcount', 'residents', 'citywide figure').

高分表达

- **shifted away from ... to ...** (从……转向……) ——精确描述人口分布重心转移, 优于 *moved from*
- **the overwhelming majority** (绝大多数) ——强化比例表达, 比 *most* 高级
- **far exceeding** (远超) ——数量对比中的强调表达
- **the main concentration of people** (主要人口聚居地) ——*population distribution* 的高级替换
- **This trend continued throughout** (这一趋势在整个……期间持续) ——时序衔接, 避免重复 *In addition/Furthermore*
- **a profound redistribution of demographic weight** (人口重心的深刻重新分配) ——总结性收尾表达, 提升段落高度

生成范文 (目标 Band 8.5+ · 200 words)

The three tables illustrate how the population of New York City changed between 1800 and 2000, showing the citywide total alongside the figures for Manhattan and the four outer boroughs (Brooklyn, Bronx, Queens, and Staten Island) as both headcounts and proportions.

Overall, the city's population expanded enormously over the two centuries, while its distribution **underwent a striking reversal**: Manhattan's dominant share contracted sharply as the outer boroughs **absorbed the vast majority of growth**.

In 1800, the city totalled just 79,216 residents, three-quarters of whom (76%) lived in Manhattan. **Rapid urbanisation** drove the citywide figure to approximately 3.4 million by 1900 — **a roughly 43-fold increase** — yet Manhattan's share had already fallen to 54% (1.85 million). The trend deepened over the following century: by 2000, Manhattan's proportion had **plummeted to just** 19% (1.54 million), and **its absolute headcount had in fact declined** from the 1900 peak.

The outer boroughs **mirrored this pattern in reverse**. Their combined population of 18,701 in 1800 (24% of the total) surged to 1.59 million by 1900, pushing their share to 46%. Growth accelerated further over the 20th century: by 2000, the four districts collectively housed around 6.47 million people — 81% of all New Yorkers — vastly outpacing Manhattan and marking **a profound redistribution of the city's demographic weight**.

Task 2: 议论文 (Writing Task 2)

教育 (Education)

Task 2 discussion [教育 Education]

Some people believe that traditional schools are the best environment for children to learn and develop. Others argue that educating children at home provides a better, more tailored preparation for their future. Discuss both these views and give your own opinion.

参考范文 (来源: 查看原文)

The debate regarding the most effective environment for childhood education is **highly contentious**. While a significant portion of society argues that traditional educational institutions are unparalleled for holistic development, others maintain that individualised home education offers superior preparation for the future. Although traditional schools foster vital interpersonal skills, I believe that educating children at home provides a more rigorous and tailored academic foundation.

On the one hand, proponents of traditional schooling emphasise the importance of social development. In a conventional classroom, children are consistently exposed to a diverse array of peers and authority figures. This environment naturally **cultivates essential soft skills** such as teamwork, conflict resolution, and empathy. For instance, when students are required to collaborate on group projects or participate in team sports, they learn how to **navigate social dynamics** and communicate effectively. Many argue that these daily social interactions are incredibly difficult to replicate in a home environment and are crucial for thriving in a modern, collaborative workplace.

On the other hand, advocates for home education argue that one-on-one instruction allows for a highly customized learning experience. In a crowded classroom, teachers are forced to teach at a generalized pace, which can leave struggling students behind or cause gifted students to lose interest. Conversely, home education allows the curriculum to be **uniquely tailored to the child's specific strengths and weaknesses**. For example, preparing a younger student at home for rigorous standardized exams allows them to accelerate through subjects they grasp easily while spending extra time mastering complex topics. I personally agree with this view, as this targeted, distraction-free preparation ultimately **maximizes a student's academic potential** and equips them with strong independent study habits.

In conclusion, both educational environments possess distinct advantages. While traditional schools are excellent for nurturing social skills and peer collaboration, I maintain that educating a child at home yields better academic outcomes. The ability to customize the pace and focus of the curriculum ensures that students are perfectly prepared for the specific intellectual challenges of their future.

亮点分析

The essay opens with a clear thesis signalling the writer's position while acknowledging the opposing view — a hallmark of Band 9 task achievement. Each body paragraph dedicates a full 100-word unit to one side, using a topic sentence, supporting detail, and a concrete example. 'On the one hand / On the other hand' creates clean

signposting. The conclusion mirrors the introduction without merely repeating it, reaffirming the opinion with fresh phrasing. Lexical choices ('contentious', 'cultivates', 'navigate social dynamics', 'uniquely tailored') are precise and varied. The shift from third-person exposition to first-person alignment ('I personally agree') in body paragraph 2 is rhetorically effective, grounding the argument in the writer's voice. **高分表达**

- **highly contentious** (极具争议性的) —— 强于 controversial, Academic Word List 高频词
- **cultivates essential soft skills** (培养基本软技能) —— 搭配 cultivate + noun phrase; 用于教育/职场语境
- **navigate social dynamics** (驾驭社交关系/人际互动) —— 高级替换 deal with social situations
- **uniquely tailored to the child's specific strengths and weaknesses** (完全针对孩子的个人优缺点定制) —— 因材施教的地道表达
- **maximizes a student's academic potential** (最大化学生的学业潜能) —— maximize potential 是学术写作高频搭配
- **a generalized pace** (统一的教学进度) —— 指班级整体进度, 与 tailored pace 形成对比
- **distraction-free preparation** (无干扰的备考环境) —— 复合修饰语, 精练而有力
- **yields better academic outcomes** (带来更好的学业成果) —— yield outcomes 是学术写作高级搭配

生成范文 (目标 Band 8.5+ · 304 words)

The question of whether children develop more fully in conventional schools or through home-based instruction **continues to generate considerable controversy among educators and parents alike**. Traditionalists argue that formal schooling delivers both academic rigour and vital social experience, whereas advocates of home education maintain that individualised tuition better addresses each child's unique needs. Although both arguments carry genuine weight, I contend that traditional schooling **lays a more robust foundation** for children's long-term development.

Those who champion conventional schooling point to its **irreplaceable social dimension**. Daily interaction with diverse peers requires children to negotiate differences, collaborate on tasks, and communicate under real-world pressure — experiences that **cultivate the interpersonal competencies** that virtually every employer now regards as indispensable. Furthermore, a certified teaching staff and structured curriculum ensure broad subject coverage and **objectively benchmarked academic progression**, giving students a coherent learning trajectory that extends reliably from early childhood through to the end of secondary education.

Proponents of home education, by contrast, emphasise the freedom to design a curriculum around the individual child. In a standard classroom, instruction must be pitched at an average level, which risks **leaving gifted learners under-stimulated and struggling students overwhelmed**. Home tuition eliminates this constraint: a curious child can explore areas of genuine interest in depth, while one who finds a subject difficult **receives sustained,**

focused attention without the added pressure of peer comparison. Advocates often cite evidence that home-educated pupils outperform their conventionally schooled peers in university admissions tests.

In conclusion, while home education clearly **offers a degree of personalisation that traditional classrooms cannot match**, I maintain that the social architecture of formal schooling remains essential to the formation of well-rounded individuals. Academic shortfalls can be addressed through tutoring, but the collaborative intelligence and resilience **forged through communal learning** are qualities far more difficult to develop in isolation, and they underpin sustained success throughout adult life.

科技 (Technology)

Task 2 opinion [科技 Technology]

Some people believe that technology has made man more social. To what extent do you agree or disagree with this opinion?

参考范文 (来源: 查看原文)

Experts throughout both the developing and developed world have debated whether **the advent of sophisticated modern technology** such as mobile phones, laptops and iPads have helped to enhance and improve people's social lives or whether the opposite has become the case.

Personally, I strongly advocate the former view. This essay will discuss both sides using examples from the UK government and Oxford University to demonstrate points and prove arguments.

On the one hand there is ample, powerful, almost daily evidence that such technology can be detrimental especially to the younger generation who are more easily affected by its addictive nature and which can result in people feeling more isolated from society. The central reason behind this is twofold. Firstly, the invention of online social media sites and apps, such as Twitter and Facebook, have **reduced crucial face-to-face interactions dramatically**. Through use of these appealing mediums, people feel in touch and connected yet lack key social skills and the ability to communicate. Secondly, dependence on such devices is built up frighteningly easily, which may have a damaging effect on mental health and **encourage a sedentary lifestyle**.

On the other hand, although there are significant downsides to technological developments, its multifold advantages cannot be denied. This is largely because the popularity of technology such as cellphones allows people to connect freely and easily **with no geographical barriers**. People are able to share any type of news, information, photos and opinions with their loved ones whenever and wherever they want, therefore **keeping a feeling of proximity and closeness**.

From the arguments and examples given I firmly believe that overall communication and man's sociability has been advanced enormously due to the huge technological progress of the past twenty years and, despite some potentially serious health implications which governments should not fail to address, it is predicted that its popularity will continue to flourish in the future.

亮点分析

This model answer scores well on Task Response and Coherence: it states a clear position early ("I strongly advocate the former view"), then devotes one body paragraph to each side with the discourse markers "On the one hand / On the other hand", and uses concrete (if invented) studies as support—a useful technique for adding specificity under exam conditions.

Its real strength is Lexical Resource: precise, less-common collocations ("the advent of sophisticated modern technology", "detrimental to the younger generation", "encourage a sedentary lifestyle", "no geographical barriers") rather than generic vocabulary. Note, however, that the original contains several slips ("it's" for "its", "huge the huge")—at a genuine Band 8.5+ these would be ironed out, which is what my own version aims to do while reusing the strongest phrasing. **高分表达**

- **the advent of sophisticated modern technology** (先进现代科技的出现/到来)——升级 the appearance of new technology
- **be detrimental to** (对……有害)——替代 be bad for
- **reduce crucial face-to-face interactions** (减少关键的面对面交流)——讨论社交/科技题常用
- **encourage a sedentary lifestyle** (助长久坐不动的生活方式)——健康/科技题高分搭配
- **with no geographical barriers** (没有地理障碍)——替代 from anywhere
- **keep a feeling of proximity and closeness** (维持亲近感)——描写远程沟通维系关系
- **hollow out the quality of those connections** (掏空/削弱这些联系的质量)——我的范文用法, 强调深度受损

生成范文 (目标 Band 8.5+ · 268 words)

It is frequently claimed that modern digital technology has rendered humanity more sociable than ever before. While I accept that such tools have undeniably widened our networks of contact, I would argue that they have simultaneously **hollowed out the quality of those connections**, making the assertion only partially true.

There is certainly compelling evidence that technology has expanded our social reach. Instant-messaging platforms and video-calling applications allow individuals to **sustain relationships across vast geographical distances** that would once have severed them entirely. A student studying overseas, for instance, can now converse face to face with family members on a daily basis, thereby preserving a sense of closeness that previous generations could scarcely have imagined. In this respect, the sheer breadth of human contact has grown exponentially.

Nevertheless, this proliferation of contact should not be mistaken for genuine sociability. For many people, the convenience of communicating through a screen has displaced the richer interactions that occur in person, fostering relationships that are **wide but shallow**. Adolescents in particular may accumulate hundreds of online acquaintances while struggling to sustain a meaningful conversation in the physical world. Moreover, the addictive design of social media frequently encourages solitary, sedentary scrolling rather than collective activity, leaving users paradoxically more isolated despite being **perpetually connected**.

In conclusion, while I acknowledge that technology has multiplied the opportunities for people to stay in touch, I only partially agree that it has made us more social, since the depth and authenticity of our relationships have arguably been diluted in the process. The real challenge lies in harnessing these tools to **complement, rather than replace, face-to-face human connection**.

社会与家庭 (Society & Family)

Task 2 discussion [社会与家庭 Society & Family]

Some people think that competition at work, at school and in daily life is a good thing. Others believe that we should try to cooperate more, rather than competing against each other. Discuss both these views and give your own opinion.

参考范文 (来源: 查看原文)

Some people argue that competition is essential for success, while others think that working together is more beneficial than competing with one another. In my opinion, both approaches are necessary, and a balance between them is the key to success.

On the one hand, competition is often seen as **a driving force for improvement**. Without it, people may lack the motivation to **push themselves beyond their comfort zones** and fail to realize their full potential. For instance, in the workplace, employees who compete for a higher position are more likely to come up with innovative ideas and become more productive. Similarly, in schools, **healthy rivalry** among students encourages them to study harder and achieve better academic outcomes. Even in daily life, competing in sports or personal challenges, such as those related to health and fitness, can inspire people to strive for excellence and achieve things they might otherwise ignore.

On the other hand, cooperation is equally vital because many achievements cannot be accomplished by one person alone. In professional settings, teamwork enables individuals to **pool their strengths and resources** to reach common objectives, such as launching a new product or running a successful business campaign. In education, students who work collaboratively on group projects not only learn the subject matter more effectively but also develop essential soft skills, like communication and empathy. Likewise, in daily life, cooperating with family members or neighbors helps **foster stronger relationships** and makes problem-solving more effective.

In my view, a combination of both competition and cooperation is necessary. Excessive competition may lead to stress, **unhealthy rivalries, or even unethical behavior**, while overemphasis on cooperation can sometimes reduce motivation and discourage personal ambition. Therefore, **striking a balance** is crucial: competition should be healthy and constructive, while cooperation should remain the foundation of long-term success.

In conclusion, competition motivates people to **maximize their potential**, whereas cooperation enables them to achieve common goals more effectively. I believe both are essential, and the key lies in maintaining a healthy balance between the two.

亮点分析

这是 Cambridge IELTS 19 Test 2 的官方真题。范文是标准的 discussion + opinion 五段结构：introduction 末句直接亮明折中立场（a balance between them is the key），两个 body 段各自完整展开一方观点，第四段单独论证自己的立场，结论复述。这种「立场贯穿全文」的写法正是 discuss both views 题型 Task Response 拿高分的关键——考官要求 opinion 不能只在结尾突然出现。

词汇上的高分点：用 a driving force for improvement、healthy rivalry 替换重复的 competition；用 pool their strengths and resources 替换笼统的 work together；论证负面影响时用 unhealthy rivalries, or even unethical behavior 形成递进。每个 body 段都严格覆盖题目给出的三个场景（work / school / daily life），这是该题 Task Response 容易丢分的隐藏要求。

衔接上，On the one hand / On the other hand / Likewise / Therefore 用得克制而准确；第四段先让步（Excessive competition may...while overemphasis on cooperation can...）再给出 striking a balance is crucial 的结论，展示了让步论证的典型写法。

高分表达

- **a driving force for improvement**（进步的驱动力）——替代笼统的 a good thing，介绍竞争益处的万能开头
- **push oneself beyond one's comfort zone**（突破自己的舒适区）——高频地道搭配，议论文写动机类话题通用
- **healthy rivalry**（良性竞争）——competition 的高级同义替换，避免重复
- **pool complementary talents / strengths and resources**（整合互补的才能/优势与资源）——写 cooperation 段的核心动词搭配，替代 work together
- **strike a balance between A and B**（在 A 与 B 之间取得平衡）——折中立场的标志句型，discussion 题型必备
- **concentrate the mind**（使人精神高度集中、全力以赴）——地道习语，描述压力/竞争带来的专注效果
- **reward merit over complacency**（奖励实干而非安于现状）——merit 与 complacency 对举，体现词汇精确性
- **corrode / erode trust**（侵蚀信任）——比 damage trust 更形象，写竞争弊端的高分动词
- **cut-throat rivalry**（你死我活的恶性竞争）——与 healthy rivalry 形成反义对照，一对同记

生成范文（目标 Band 8.5+ · 318 words）

Whether people thrive more by competing or by collaborating is a question that cuts across offices, classrooms and homes. Proponents of competition credit it with **spurring individuals to outperform** their own limits, whereas advocates of cooperation counter that collective effort accomplishes what no individual ever could. I would argue that competition is a useful spark, but cooperation is the engine of lasting achievement.

Those who champion competition point out that the prospect of being measured against others **concentrates the mind** remarkably. A salesperson chasing a leaderboard, or a student aware that university places are **fiercely contested**, will typically work with an urgency that comfortable environments rarely produce. Competition also functions as a filter: it **rewards**

merit over complacency, ensuring that promotions, prizes and contracts flow to those who have genuinely earned them. Seen this way, rivalry is not hostility but a discipline that keeps standards high in the workplace, at school and even in personal pursuits such as fitness.

Sceptics respond that an obsession with winning **corrodes the trust** on which workplaces and communities depend. Colleagues who regard one another as threats hoard information rather than share it, and pupils ranked against their classmates may absorb the poisonous lesson that a peer's failure is as valuable as their own success. Cooperation, by contrast, allows people to **pool complementary talents**: the defining breakthroughs of modern science, almost without exception, have come from teams rather than lone geniuses, and everyday life runs on the same quiet collaboration between neighbours and families.

In my view, the two are not genuine alternatives but ingredients to be blended. Competition is best deployed sparingly, as a short-term spur to effort, while cooperation should remain the default mode of working, because trust, once **eroded by cut-throat rivalry**, is extraordinarily difficult to rebuild. A society that teaches people to compete with their own past performance yet cooperate with everyone else will enjoy the best of both.

交通 (Transport)

Task 2 opinion [交通 Transport]

Governments should spend money on railways rather than roads. To what extent do you agree or disagree with this statement?

参考范文 (来源: 查看原文)

The allocation of government funds for infrastructure development is a crucial aspect of shaping a nation's transportation network. The statement suggesting a preference for investing in railways over roads raises questions about **the optimal use of public resources**. In my opinion, while both modes of transportation are essential, the argument in favor of prioritizing railways has its merits.

Firstly, railways offer a more sustainable and eco-friendly transportation option compared to roads. Trains are generally more energy-efficient and produce fewer emissions per ton-mile than individual vehicles. Investing in railways aligns with global efforts to **reduce carbon footprints and combat climate change**, making it a more environmentally responsible choice.

Moreover, railways often prove to be **more cost-effective in the long run**. Though the initial investment for constructing rail infrastructure may be higher, maintenance costs and operational expenses are typically lower than those associated with maintaining extensive road networks. This cost efficiency is particularly beneficial for governments **facing budget constraints**, allowing for the allocation of resources to other essential sectors. An example of successful railway investment is evident in countries like Japan and many European nations. Their advanced and extensive rail networks have not only facilitated efficient transportation but also **reduced traffic congestion and enhanced overall connectivity**.

However, it is essential to acknowledge that a balanced approach is crucial. Some regions may require road development to address specific transportation needs, such as connecting remote areas or facilitating **last-mile connectivity**. In rapidly developing

urban centers, investing in both railways and roads can provide comprehensive solutions to meet the diverse and evolving transportation demands of the population.

In conclusion, while both railways and roads play vital roles in a nation's transportation network, prioritizing investment in railways offers environmental sustainability and long-term cost efficiency. A thoughtful and balanced approach, considering the unique needs of each region, should guide government decisions on infrastructure development to ensure optimal utilization of public resources.

亮点分析

这是 Cambridge IELTS 11 Test 1 的真题，纯 opinion 题型 (to what extent agree or disagree)。范文立场是「部分同意」：intro 末句先表态 (the argument in favor of prioritizing railways has its merits)，两个 body 段从环保 (emissions per ton-mile, carbon footprints) 和长期成本 (initial investment vs maintenance costs 对比 + 日本/欧洲实例) 正面论证铁路优先，第四段以 However 引出让步 (偏远地区、last-mile connectivity 仍需公路)，结论重申「优先铁路 + 平衡兼顾」。这种 partially agree 写法正是 to what extent 题型拿高分的安全结构——表明程度，而非简单二选一。

词汇高分点集中在「公共开支」语域：allocation of government funds、optimal use of public resources、facing budget constraints，以及交通话题的精确术语 per ton-mile、last-mile connectivity。论证上「先承认初期投资高、再用长期维护成本低反转」的让步-反驳小结构 (Though the initial investment may be higher, ...) 值得模仿。

可改进处：第四段的让步与结论略有重复，且全文连接词偏教科书化 (Firstly / Moreover / However / In conclusion)；自写作文可以用更自然的衔接和更具体的反方场景 (救护车、货运、农村交通) 让让步段更有说服力。**高分表达**

- **the optimal use / utilization of public resources** (公共资源的最优利用) —— 政府开支类题目的万能名词短语
- **reduce carbon footprints and combat climate change** (减少碳足迹、应对气候变化) —— 环保论证的标准搭配，combat 比 fight 更书面
- **cost-effective in the long run** (长期来看更具成本效益) —— 与 initial investment 对举，构成让步-反驳
- **face budget constraints** (面临预算约束) —— 替代 have little money 的高级表达
- **last-mile connectivity / the last mile** (「最后一公里」交通衔接) —— 交通话题的精确术语，体现 topic-specific 词汇
- **alleviate / ease traffic congestion** (缓解交通拥堵) —— 交通题必备动词搭配，替代 reduce traffic
- **complement rather than compete with** (互补而非竞争) —— 让步立场金句，适用于任何「A vs B」类题目
- **lure drivers away from their cars** (吸引司机弃车改乘公共交通) —— 替代 encourage people to use public transport，生动且精确
- **a crumbling road network / crumbling infrastructure** (年久失修的公路网/基础设施) —— crumbling 一词写出疏于维护的画面感

生成范文 (目标 Band 8.5+ · 287 words)

Where limited transport budgets should flow —into rail or into asphalt —divides policymakers everywhere. I largely agree that railways deserve the greater share of public investment, although I would stop short of starving road maintenance altogether, since the two networks ultimately **complement rather than compete with** each other.

The strongest case for rail is its capacity to move enormous volumes of people and freight using a fraction of the land, fuel and casualties that roads demand. A single commuter line can carry as many passengers per hour as a ten-lane motorway, yet produces far lower emissions per head —a decisive advantage for governments under pressure to **decarbonise their transport sectors**. Rail spending is also self-reinforcing: fast, reliable trains **lure drivers away from their cars**, which in turn **alleviates congestion** on the roads for the journeys that genuinely require them, from ambulance call-outs to freight deliveries.

Nevertheless, treating road budgets as expendable would be short-sighted. Buses, emergency services and virtually all rural traffic depend on roads, so a **crumbling road network** punishes precisely those communities that trains seldom reach. Furthermore, every rail journey begins and ends with the so-called **last mile**, which is almost always travelled on a road; a gleaming high-speed line fed by impassable local streets simply shifts the bottleneck rather than removing it. Repairing potholes is unglamorous, but it is indispensable.

On balance, I side firmly with prioritising railways: they offer cleaner, safer and more space-efficient mobility, and decades of **historic underinvestment** in rail have left ample room for high returns. Priority, however, is not monopoly. A sensible government channels the bulk of new investment into rail while keeping the existing road network in sound repair, so that each mode does what it does best.
